IMAGE PREPROCESSING WORKFLOW

1. ORIGINAL IMAGE

- Raw dataset image
- Varying sizes
- Different lighting
- Noise and variations

2. RESIZED IMAGE

224 × 224 × 3

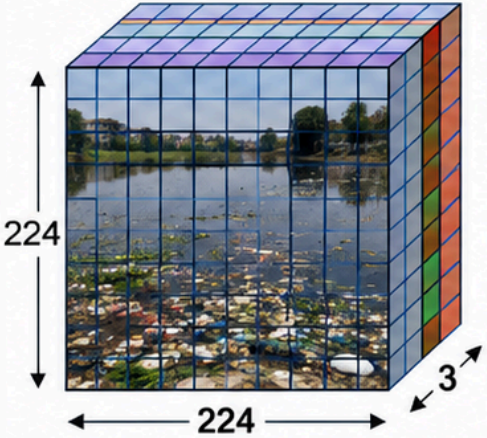
- Resized to 224 × 224 pixels
- Maintains aspect ratio
- Reduces computational cost

3. NORMALIZED IMAGE

224 × 224 × 3

- Pixel values scaled to [0, 1]
- Normalization improves model convergence
- Reduces lighting variations

4. CNN INPUT



224 × 224 × 3

- Ready for CNN model
- Shape: (224, 224, 3)
- 3 Channels (RGB)
- Input to convolution layers

Note: Preprocessing ensures consistent input size, improved model performance, and faster training.
